

Opportunities – Management System Specialists (MSS)

CIBSE Certification is looking for experienced professionals with the required sector knowledge, and demonstrable experience in management systems implementation. If this sounds like you, and you run your own business and looking to expand or diversify then this opportunity might be for you!

If interested please refer to our website <https://www.cibsecertification.co.uk/personnel-certification/management-system-specialist/> or contact us epc@cibsecertification.org

CIBSE Certification, a wholly owned subsidiary of the Chartered Institute of Building Services Engineers is widely recognised as the primary Certification Body of competent personnel, and management systems in the built environment.

Our recent appointment as the UK Administrator for NABERS UK and launch of an Embodied Carbon verification scheme underscores our ambition and drive towards a more sustainable and resilient built environment.

Organisations have to deal with ongoing challenges: increasing costs, skills shortage, demonstrating competency, increasing customer expectations, and changing health & safety and environmental regulations. Optimisation of processes and systems, and selection of competent suppliers is essential in these times to ensure efficient and conforming operations.

While CIBSE certifies quality, environmental, energy management and health and safety systems, we cannot offer consulting services or advise on system implementation. In such cases and to remain impartial we direct enquiries to our register of experts who can deal with such questions. CIBSE experts conform to CIBSE's code of conduct but will contract and offer their services directly to other businesses.

Increasing demand for competent management system experts is driving the expansion of our MSS scheme, starting from energy management to now including personnel competent to deliver system implementation services across ISO 9001, ISO 14001, ISO 45001, and ISO 50001.

While not a prerequisite of our scheme, experts may already be experienced auditors, and worked with UKAS accredited Certification Bodies, prior to establishing their own businesses.
